

SHOPTALK MOBILE

MOBILE COMPUTING FOR YOUR INDUSTRY

HERE'S WHAT CUSTOMERS ARE SAYING ABOUT SHOPTALK MOBILE:

*"This system has been ideal
for our employees"*

— **KAREN WALLS**
CHIEF FINANCE OFFICER

*"The most packages we could
get out would be 200 per day
and that was probably utilizing
3 or 4 people. We've had
days where we've been able
to ship over 1,000 packages
just using 2 people. So, we
can ship five times as many
packages and use half the
staff."*

RICH WEIGOLD – DIRECTOR OF
MANUFACTURING

WHAT CAN **YOU** DO WITH SHOPTALK MOBILE?

- INSPECTION
- MAINTENANCE
- PICKING
- ISSUES
- RETURN GOODS
- PUT AWAY
- FINISHED GOODS
- CYCLE COUNTING

THE LIST GOES ON...

SHOPTALK MOBILE PROVIDES INDUSTRY SPECIFIC SOLUTIONS

ShopTalk Mobile enables companies that have employees on the move to increase productivity, decrease errors, and ensure profits. This is achieved by combining ShopTalk Mobile's software with a hands-free, light weight wearable computer and voice technology. This permits information to be immediately communicated, allowing tasks to be managed quickly and more efficiently. So, no matter what the application or where your employees do their work - in the field, office, shop, or warehouse - ShopTalk Mobile is the ultimate time saver and productivity enhancement to your operations!

Using a headset with an earphone speaker and a noise-canceling microphone, workers talk to the system to issue commands and enter data.

ShopTalk Mobile applications use speech technology to enable mobile workers to keep their eyes, hands and attention on the tasks at hand.

The optional compact 8.4" touch screen makes it easy to view applications and enter data.

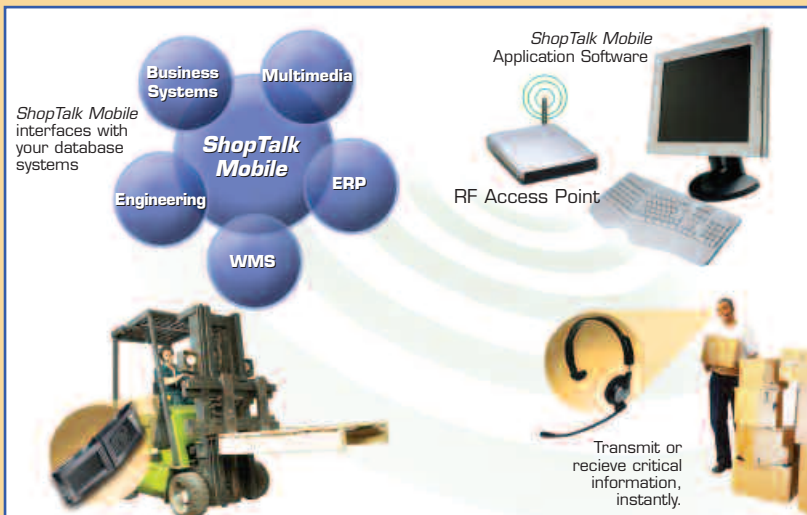

DISTRIBUTION

Employees utilizing ShopTalk Mobile are able to process orders faster and get more inventory out to customers or the shop floor. Using voice commands, workers can receive pick lists and locations or confirm orders without delay. ShopTalk Mobile enables employees to complete tasks "hands-free," which improves focus and task accuracy - less errors are made during

picking and shipping. Inventory replenishment and control can be managed more effectively as ShopTalk Mobile lets workers go beyond desks and paperwork. This wearable computing solution achieves time-saving productivity which pays for itself.

HOW IT WORKS:

SEAMLESS INTEGRATION WITH EXISTING SYSTEMS

ShopTalk Mobile seamlessly integrates into existing networks, and is engineered to link with existing databases. Current computer networks are merged with this wireless communication system to enable workers to speak, listen and/or transmit critical information. The headset, lightweight wearable computer and optional compact touch screen allows workers to input data by touch or by voice and attend to tasks with their hands and eyes free. This integration of voice technology and data management allows workers flexibility beyond paper and keyboards.

INSPECTION & MAINTENANCE

Expediting time spent on inspections and maintenance can be critical to ensuring overall operations, not just safety and productivity. ShopTalk Mobile accomplishes this and reduces operational costs by enabling inspection liaisons and field workers to readily access instructions and information real time. ShopTalk Mobile's lightweight, wearable computer and headset with optional compact touch

screen enables workers to operate even in the tightest of locales without having to return to their office or bench to look up vital information. By accessing remote data, timely searches for job regulations and related safety instructions are eliminated.

Potential problems can be promptly addressed and inspections completed faster. Routine checks and paper work can also be completed with greater efficiency and speed by transmitting reports and findings during the inspection right into your existing reporting system.

MANUFACTURING & PRODUCTION

ShopTalk Mobile technology empowers employees to communicate job, quality assurance, and labor information when and where they need it. It's compact, portable system can go anywhere in the manufacturing environment; enabling employees to process and complete any task without having to stop and look up or verify instructions. ShopTalk Mobile's hands-free operation not only promotes prompt communication and data retrieval while decreasing extra steps and interruptions to workflow, but also ensures greater worker safety and productivity.
